Login/Register

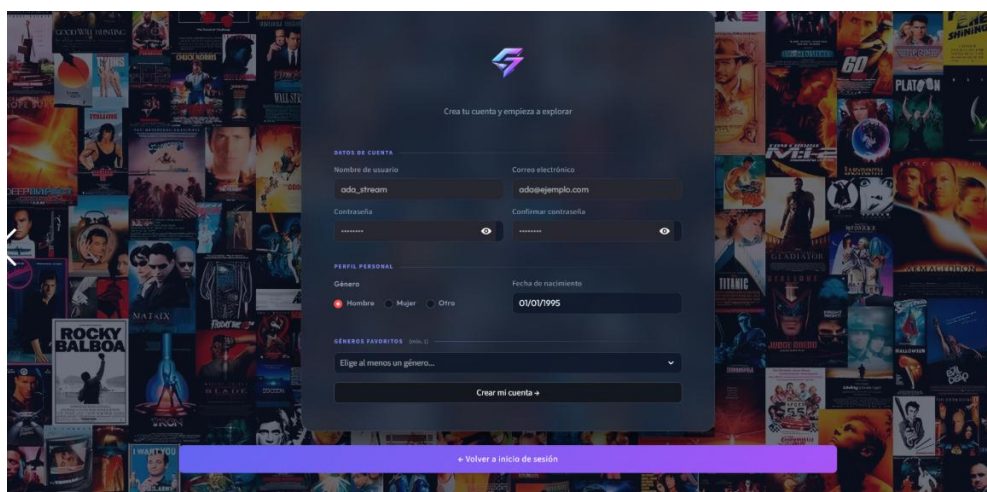

The first step is to access the application. When opening the system, the first screen displayed will be the login page.

From this screen, users who already have an account can enter their credentials to access the application. However, if the user does not yet have an account, they must proceed to the registration page.

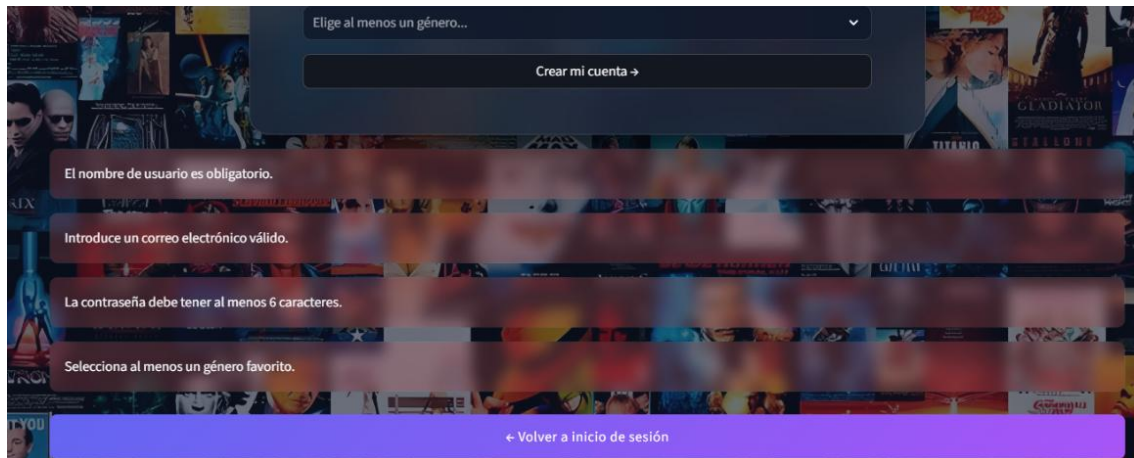

To do this, click on the Register option available on the login screen. This will redirect the user to the account creation form where they can enter the required information to create a new account:

Once on the registration page, the user will see the information required to create a new account. The form includes several fields that must be completed, such as username, password, email address, gender, date of birth, and at least one favorite movie genre:

All the required information must be filled in before submitting the form. Selecting at least one favorite movie genre is mandatory, as it will be used by the system to personalize recommendations and improve the user experience.

The image shows a registration form with a dark background and movie posters. At the top, there is a dropdown menu labeled "Elige al menos un género..." and a button "Crear mi cuenta →". Below the form, four red error messages are displayed: "El nombre de usuario es obligatorio.", "Introduce un correo electrónico válido.", "La contraseña debe tener al menos 6 caracteres.", and "Selecciona al menos un género favorito.". At the bottom, there is a purple button labeled "← Volver a inicio de sesión".

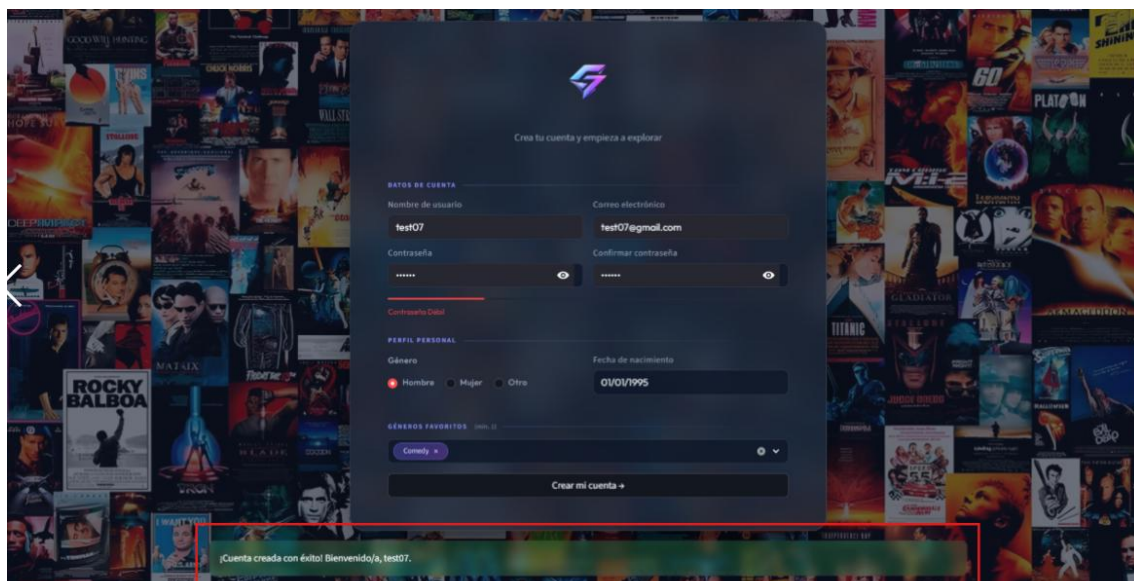

Other possible errors include the password not matching the confirmation, the password not meeting the required complexity, or the username or email already being taken, as both must be unique.

La contraseña debe tener al menos 6 caracteres.

Ese nombre de usuario ya está en uso.

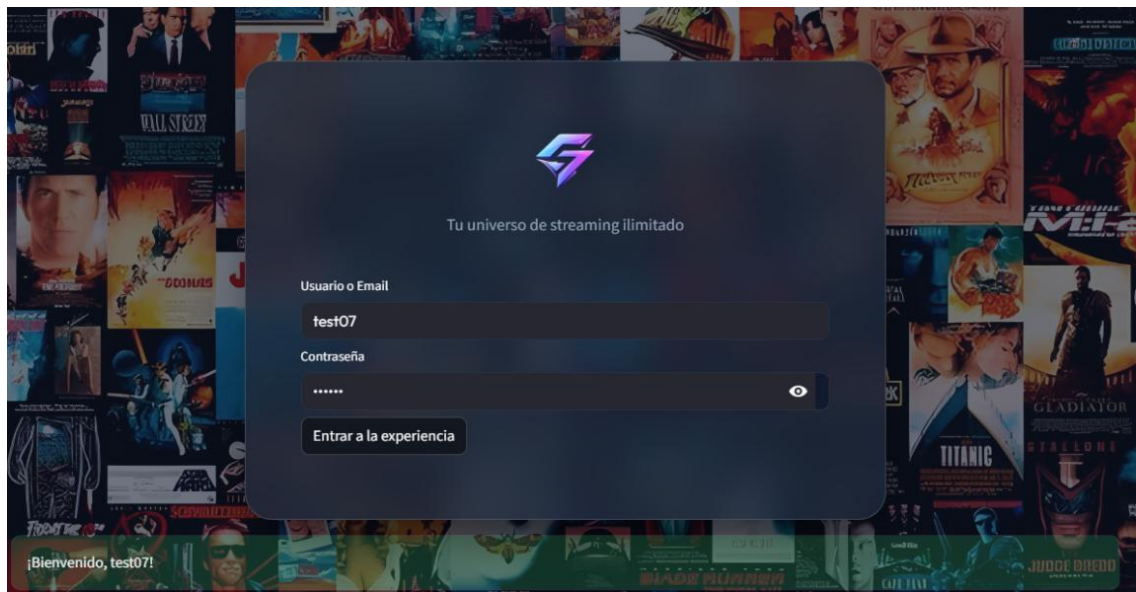

Ese correo electrónico ya está registrado.

If everything is correct, we will know it when the confirmation message appears indicating that the account has been successfully created.

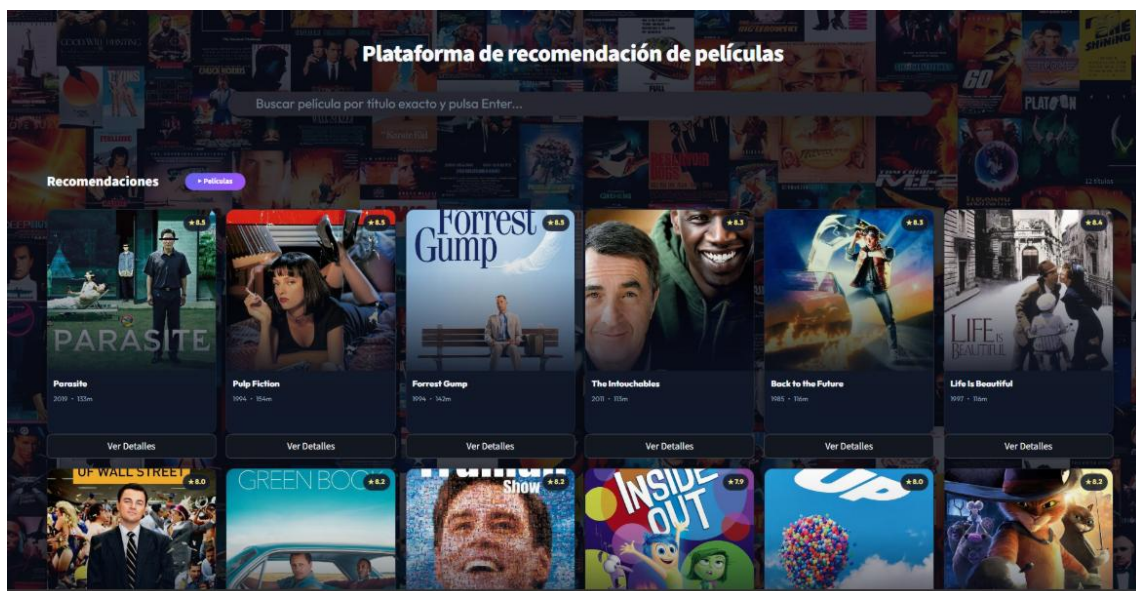

The image shows the registration form with a dark background and movie posters. The form is filled with the following information: "Nombre de usuario: test07", "Correo electrónico: test07@gmail.com", "Contraseña: *****", "Confirmar contraseña: *****", "Género: Hombre", "Fecha de nacimiento: 01/01/1995", and "Género favoritos: Comedy". At the bottom, there is a button "Crear mi cuenta →". A red box highlights a green success message at the bottom: "¡Cuenta creada con éxito! Bienvenido/a, test07."

Now we can return to the login page to sign in.

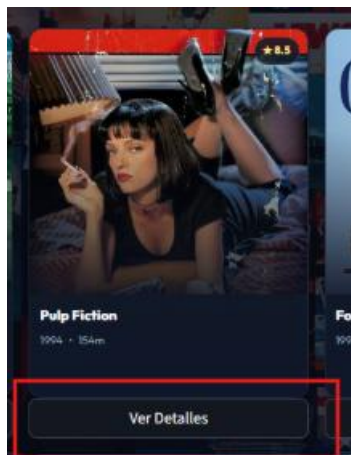

Dashboard

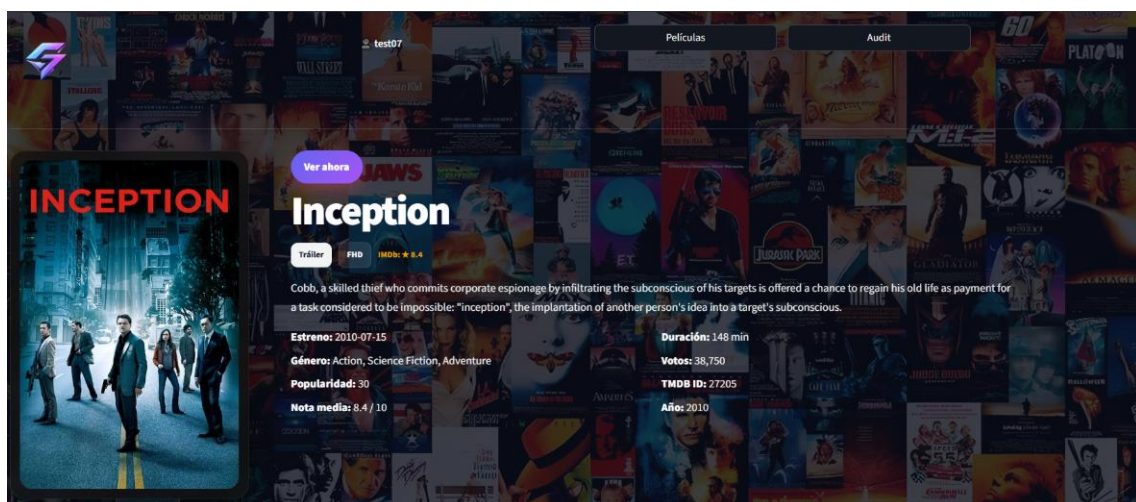

Once on the dashboard, we will see a top bar displaying the username and the available actions. Below it, there is a movie search bar that allows users to search for movies by title. Further down, there are three sections containing 12 movies each: Recommendations, Popular, and Random.

From here, we can select a movie to rate by clicking on **View Details**.

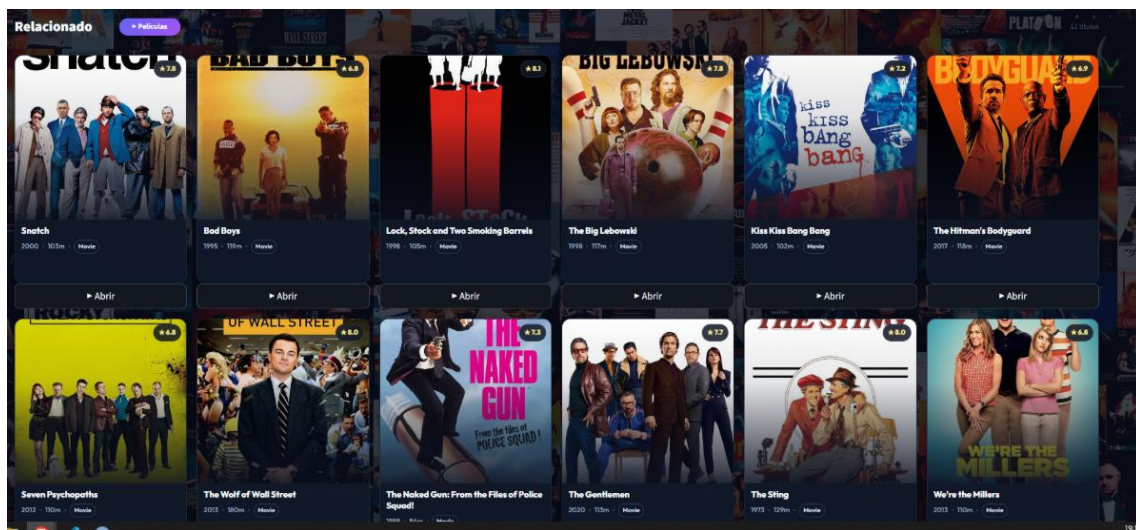

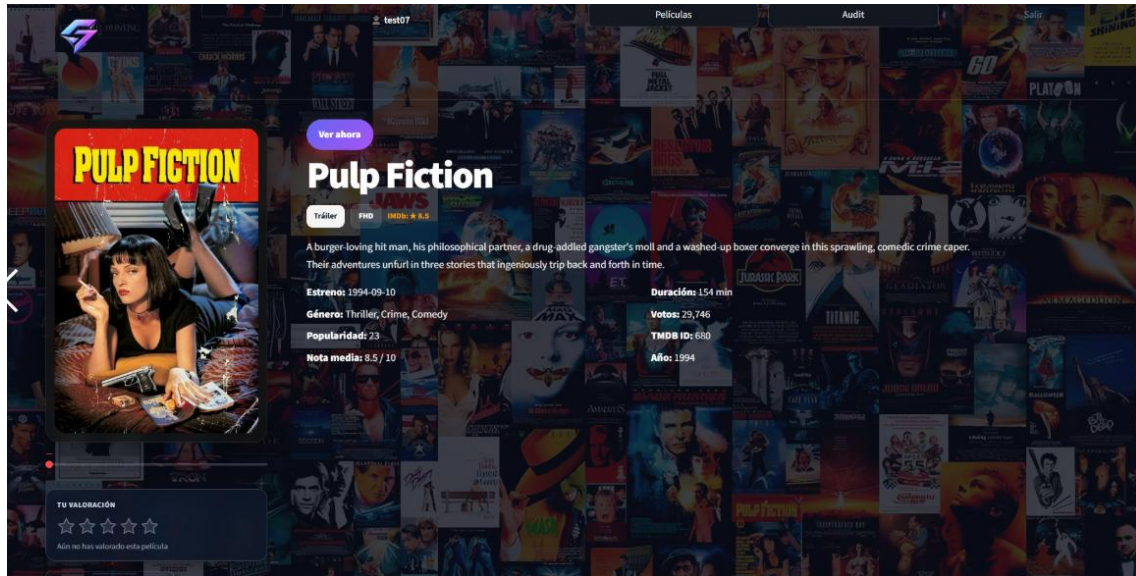

Another feature available on the dashboard is the **search by title**. If we search for a movie but do not enter the exact title, nothing will happen. Therefore, it is important to make sure the title is written exactly as it exists. If the title is entered correctly and the movie exists in the system, the user will be redirected to that movie's card.

MovieCard

If we click in “See more details”, that will take us to another screen, the page dedicated to that specific movie. Here we can see more detailed information about the movie, rate it, and view **12 related movies** associated with the one currently displayed.

To rate a movie, simply drag to select the desired number of stars for that movie and click Save Rating.

Once we rate a movie, the recommender system will be updated accordingly. This update will affect both the related movies section on the same movie page and the Recommendations and Popular sections on the dashboard, taking into account the newly saved rating.
